

## Experiment:- 16

### Problem Statement:-

In Linux systems, administrators often need to list files along with their metadata such as creation or modification time in an organized and readable format. Displaying file names with serial numbers and timestamps is useful for auditing, reporting, backup verification, and log management. Automating this task using shell scripting improves efficiency and consistency.

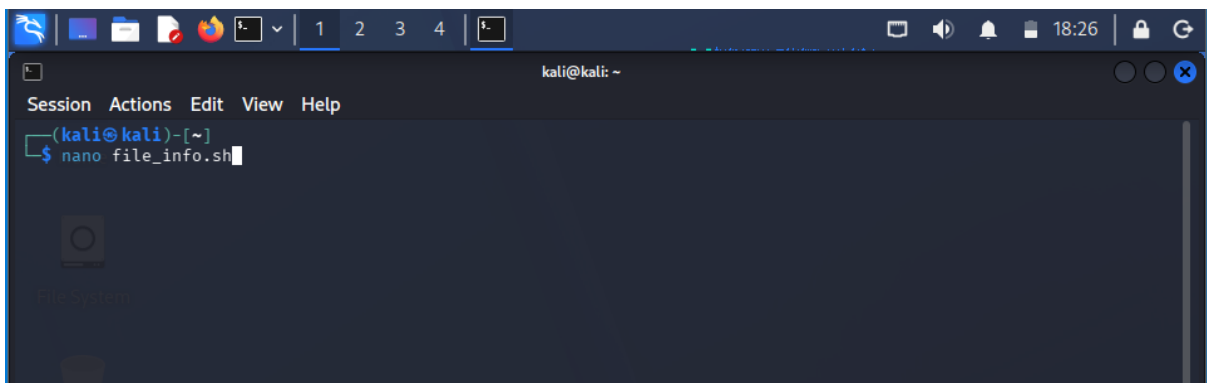

The problem is to write a shell script that lists all files in a directory along with a serial number and their creation (or last modification) date, demonstrating file metadata handling and formatted output in Bash scripting.

**Aim:-**Shell script to print file names with creation date and serial number

### Procedure:-

A. Writing the Shell Script

1. Open the terminal.
2. Create a script file: nano file\_info.sh

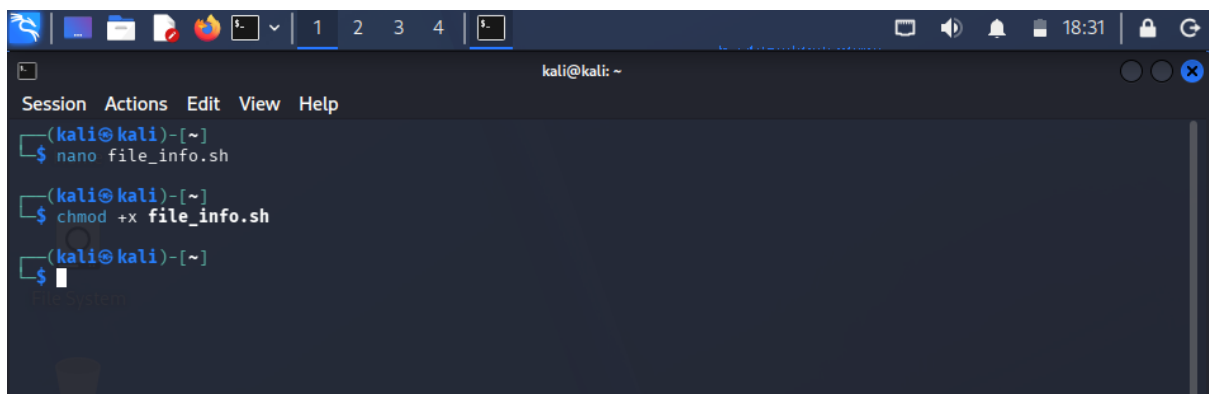

3. Enter the following script:

```
File Actions Edit View Help
GNU nano 8.4 file2_info.sh
#!/bin/bash
count=1
echo "s.no    file name    date"
for file in *
do
    if [ -f "$file" ]; then
        mod_date=$(stat -c %y "$file" | cut -d'.' -f1)
        echo "$count    $file    $mod_date"
        count=$((count + 1))
    fi
done
```

4. Save and exit the editor.

5. Make the script executable: `chmod +x file_info.sh`

```
kali@kali: ~
Session Actions Edit View Help
(kali@kali)-[~]
$ nano file_info.sh
(kali@kali)-[~]
$ chmod +x file_info.sh
(kali@kali)-[~]
$
```

6. Run the script in a directory containing files: `./file_info.sh`

```
kali@kali: ~  
Session Actions Edit View Help  
(kali@kali)-[~]  
$ nano file_info.sh  
(kali@kali)-[~]  
$ chmod +x file_info.sh  
(kali@kali)-[~]  
$ ./file_info.sh  
./file_info.sh: line 2: count: command not found  
s.no  filename  date  
      arithmetic.sh  2026-04-30 17:27:00  
1      condition.sh  2026-04-30 17:29:46  
2      date_time.sh  2026-04-30 18:22:27  
3      file_info.sh  2026-04-30 18:31:05  
4      file_list.txt  2026-04-30 17:02:50  
5      file_ops.sh   2026-04-30 17:37:09  
6      inode_test.txt 2026-04-30 16:57:51
